# SupplyChain — AI-Powered Supply Chain Intelligence Platform

Demand × Inventory × Order-to-Cash × Procurement × AI = Supply Chain Excellence

**Powered by NexusAI**

Beverage Manufacturing
9 Data Domains · 40+ Entities

**PROJECTED ROI**

Demand Forecasting, Inventory Optimization, Order-to-Cash and Procurement Intelligence

**30%**
Inventory cost reduction

**$5.7M–$10.1M**
Combined annual ROI

## HOW SUPPLYCHAIN WORKS

### DATA SOURCES

- **Salesforce CRM** — Customer & demand signals
- **SAP S/4HANA** — Inventory, production & logistics
- **Oracle ERP** — Finance, AR, AP & cost management
- **Logistics Systems** — Routes, delivery & warehouse

**SupplyChain AI Engine**

SCOR/GS1-aligned ontology · Salesforce × SAP × Oracle unified

- Demand Forecasting
- Inventory Optimization
- O2C Analytics
- Procurement Risk
- Route Planning
- Spend Intelligence

### INSIGHTS DELIVERED

- **Demand Predictions** — SKU-level accuracy
- **Stock Optimization** — Reorder & safety stock
- **O2C Health** — DSO, aging & cash flow
- **Supplier Risk Scores** — Composite 0-100

| 30% | 15% | 40% | 95%+ | 90 days |
|---|---|---|---|---|
| Inventory carrying cost reduction | Demand forecast accuracy gain | DSO reduction achieved | On-time delivery rate | Full deployment timeline |

## THE CHALLENGE

- **Demand Blindness** — Manual forecasting based on historical averages misses market signals — leading to overstock of slow movers and stockouts of fast movers.
- **Inventory Fragmentation** — Stock data scattered across SAP, warehouse systems and spreadsheets — no unified real-time visibility across the distribution network.
- **Order-to-Cash Leakage** — $2.8M annually lost to DSO drift, unresolved deductions, and credit terms inconsistently applied across customer segments.
- **Supplier Concentration Risk** — 60% of critical materials sourced from single suppliers — no composite risk scoring or early-warning system in place.
- **Disconnected Planning** — Demand planning, production scheduling and logistics operate in silos — resulting in bullwhip effects and excess safety stock.
- **Manual Procurement** — Purchase orders raised reactively against stock-outs — no AI-driven reorder points, spend analytics or contract compliance monitoring.

## THE SOLUTION

A unified AI intelligence layer connecting Salesforce CRM, SAP S/4HANA and Oracle ERP — delivering demand predictions, inventory optimization, O2C monitoring and procurement risk scoring across a 9-domain enterprise ontology.

**AI Demand Forecasting**
Time-series ML (Prophet + XGBoost) predicts SKU-level demand 4-8 weeks out — factoring seasonality, promotions and market signals.

**Inventory Optimization Engine**
Mixed-integer optimization calculates optimal reorder points, safety stock levels and distribution allocation across the network.

**Order-to-Cash Monitor**
Tracks every order from booking to cash collection — flags DSO drift, aging receivables and deduction anomalies in real time.

**Supplier Risk Scoring**
Composite risk score (0-100) across delivery reliability, financial health, geographic risk, quality and contract compliance.

**Smart Procurement**
AI-driven purchase order generation against optimized reorder points — with spend analytics and contract compliance enforcement.

**Route & Distribution Intelligence**
VRP optimization for delivery routes, warehouse allocation and last-mile planning — reducing logistics cost by 12-18%.

## RESULTS DELIVERED

**$1.2M–$2.5M** Demand Accuracy ROI
Reduced overstock waste and stockout losses through ML-driven SKU-level forecasting.

**$1.5M–$3.0M** Inventory Savings
Optimal safety stock and reorder points cut carrying costs by 30% across the distribution network.

**$1.8M–$2.8M** O2C Recovery
DSO reduced by 40%, deduction leakage eliminated, and credit terms consis enforced.

**$1.2M–$1.8M** Procurement Value
Smart reorder automation, spend analytics and single-source risk mitigation

**95%+** On-Time Delivery
Route optimization and predictive logistics planning improved OTIF from 82 95%+.

**90 Days** Full Production
Enterprise-wide deployment across 9 data domains with no system replacem required.
